

# NFPA SAFETY INSPECTIONS

PRODUCT BULLETIN

A-R-0001

NFPA inspections are an essential part of keeping your equipment safe and up to code, and your employees well-protected

## BENEFITS:

- Confidence that your high-temperature equipment is operating in compliance with NFPA standards of safety
- Minimize the opportunity for personal harm to the operators and maintenance personnel you employ due to equipment neglect
- The detailed Audit Report that results from the inspection will explain any unresolved issues and offer options for remediation (service, upgrades, rebuilds, etc.)
- Calibration and cleaning included in the inspection will likely enhance the efficiency and lifespan of the equipment while reducing the opportunity for dangerous combustion

Audit completed within 24-hours of oven being shut down

# NFPA SAFETY INSPECTIONS

CUSTOMER SUPPORT

## PRODUCT BULLETIN

### APPLIES TO:

- All Industrial Ovens and Washers
  - Natural Gas Equipment
  - Propane Equipment

Nothing is more important than the safety of your team. A yearly NFPA audit delivers the peace of mind that your equipment is performing properly and is up to NFPA 86 code.

ITS field service engineers provide onsite diagnostics utilizing NFPA and extensive industry experience. This service ensures the overall mechanical and electrical safety features are functioning properly on your equipment.

### NFPA Audit Includes:

- Validate NFPA compliance of:
  - Hi and Low Gas pressure switches
  - Combustion exhaust
  - Recirculation airflow switches
  - Temperature Hi Limit Sensor
  - Valves, main and pilot
- Verify condition and functionality of the spark igniter and/or flame rod and UV scanner
- Confirm integrity of the flame module
- Cleaning of internal components to prevent combustion

This simple audit performed yearly can save someone's life
